

Amendments to the Specification

Please amend the paragraph which begins on page 1, line 3 in the Specification as follows:

This invention relates to a communication-associated process involving imaging-related interaction between a client device (a computer) and an imaging device, such as a printer, a scanner, a facsimile machine, a copier, a multi-function peripheral, an electronic whiteboard, a tablet PC, a CD burner, and others. In particular, the invention pertains to a method and a structure regarding the requested downloading, from an imaging device to a client device, of an appropriate imaging driver, and of related configuration information, which driver and information are referred to herein as an associated pair embedded in the imaging device, followed by auto-configuring of the downloaded driver in the client device. For the purpose of illustration herein, the invention, in its preferred and best-mode form and manner of practice, is described herein in a context wherein the imaging device is a printer, and the requested driver is a printer driver.
